

## METHOD AND APPARATUS TO WRITE BACK DATA

Abstract

Briefly, in accordance with an embodiment of the invention, a method and  
5 apparatus to write back data is provided. The method may include setting a status  
corresponding to a block of data in response to a change in address mapping to  
indicate that the block of data is pending write back. The apparatus may include a  
storage area to store a status associated with a block of data to indicate that the block  
of data is pending write back and is not accessible with the current address mapping.  
10 Other embodiments are described and claimed.
